

GSM alarm system

Security is now possible in places where first it was not: places without power supply or in situations where installation work is not appreciated.

- The Mobeye® is unique in its kind. It is an all-in-one alarm system, with its own power supply.
- The Mobeye® is characterised by simplicity. You can easily hang the small box or just lay it down.
- No separate accessories, no power cables. It includes a motion detector, temperature sensor and a GSM module. Battery life is sustained for over one year.

The product

The Mobeye® detects motions. As soon as the passive infrared sensor (PIR) is triggered, the Mobeye® sends messages by GSM and (optionally) the internal siren sounds. It is also possible to monitor the temperature limits. With a personal code the system is switched on and off.

The alarm system is able to send test notifications to you periodically, in order to ensure the active status of the system.

As soon as the batteries need replacement, a warning will be sent by SMS.

Alarm notification

The alert is simple. Once the Mobeye® perceives movements, it activates the internal GSM module, sends an SMS message and calls the programmed numbers. You can send messages to a maximum of two numbers.

As soon as the temperature gets below or over the programmed limits, the alert will be sent as well. Both functions can work at the same time, or independently.

Applications

The Mobeye® alarm can be applied in a flexible manner. For your boat in the harbour, or in the garage box where you store many things of value. The shed at the back of the garden. In your house under construction, where the kitchen has just been placed. Or as security in your empty (vacation) house, where the electricity was shut down. The Mobeye® can also be applied during the holidays or events.

The operation is easy, installation work not necessary. The Mobeye® alarm system is ideally suited for places lacking power supply. In this way your goods can always be left behind while being secured.

anytime

Mobeye® protects your belongings

Do you want to leave your belongings safely? Mobeye® keeps an eye on your goods and reports on suspected movements. You can opt for a silent or loud alarm on spot. After each alarm it resets itself and will only report again if it detects new movements. You can also monitor the temperature of your room. Mobeye® measures the temperature every 15 minutes and warns you in case it is too cold or too hot. As long as the out-of-range temperature remains, the report will be repeated hourly. Once the temperature is back to normal, the Mobeye® confirms this to you.

inside your storage unit

in your boat or caravan

No power supply necessary

No phone line required

No installation work

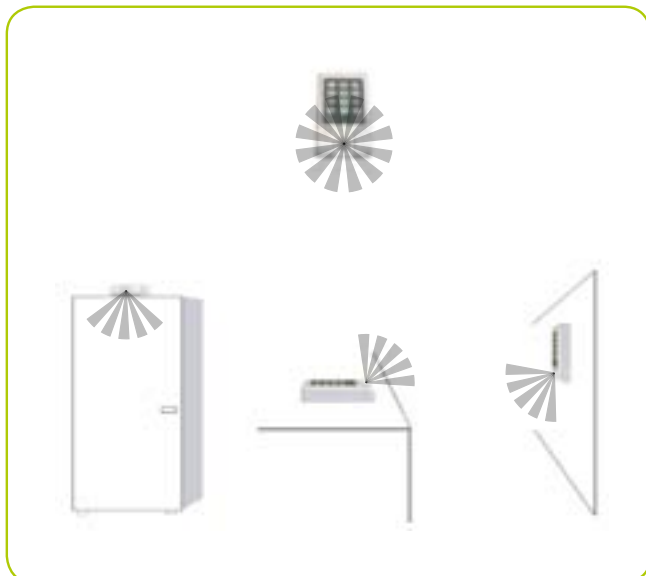

for your house under construction

... or in your holiday home

Detection area

The Mobeye® can be positioned on a wall or simply on a table. The movement detector overlooks a distance of about 10 meter, 360 degrees circular. The shape of the casing allows you to choose the angle at which you want to observe movements.

Technical specifications

Dimensions	90 * 161 * 35 (mm)
Power supply	4* lithium 3 V battery
Battery life time	> 1 year
Power	< 50 microA
Detection range	ca. 10 meter
Temperature range	-10 until 50 degrees Celsius

Features

- adjustable personal code
- alarm message to (max. 2) numbers
- adjustable min. and max. temperature
- option for silent or loud entry delay
- option for silent or loud alarm
- adjustable time entry delay
- programmable notification text for SMS messages
- adjustable sensor sensitivity
- test messages with an adjustable interval
- 'battery low voltage' SMS alert
- sensor test to determine the best position for the Mobeye®
- test function to measure the GSM signal strength
- opportunity to get a view of the settings by SMS
